SECURITY-DRIVEN IT CONSULTING AND MANAGEMENT PROFESSIONAL | DIVERSE EUROPEAN EXPERIENCE
EXPERTISE DESIGNING, DEVELOPING, IMPLEMENTING, AND SUPPORTING INFORMATION / SYSTEM SECURITY INFRASTRUCTURES

Technically and commercially astute IT Security Consultant with around 20 years' success in dynamic arenas, including heavily regulated financial services:

✓ Promoted and enforced compliance with organization's security controls.
✓ Worked collaboratively with all levels of specialists, managers, and executives in continuous delivery of IT initiatives on time and within budget.
✓ Supported wide range of organizations in optimising benefits of IT security investments via comprehensive research, development, and launch of high-impact technologies.
✓ Proven expertise in cryptography, PKI, key lifecycle management, and compliance-driven product strategy.
✓ Enhanced secure data management and sharing via automation, virtualisation, and new systems implementation.
✓ Heightened intrusion incident tracking through development of wireframe for use by support team.
✓ Adept at bridging the gap between engineering and business teams to develop usable, compliant, and secure systems.
✓ Cultivated culture of cross-functional and multinational collaboration (India, Singapore, and Germany), ensuring effective communication of goals as well as building and motivating talented teams.

CORE COMPETENCIES

IT Consulting | Project Management | Enterprise Security Strategy | Testing | IT Governance
Cryptographic Architecture (PKI, HSM, TLS, OpenSSL, Digital Signatures)
Integrated Security Planning | Security Infrastructure Development Process Optimisation | Training
Regulatory Compliance | Intrusion Detection | Risk / Vulnerability Assessment | Strategic Planning
Engineering Methodology | Software Development Lifecycle (SDLC) | Resources Allocation

Technical Skills: F5 LTM/ASM, AWS, Cloudflare, MySQL DBMS, Perl, PHP, JMeter, Webscarab, Microsoft Products, ModSecurity, LDAP, AWK, SED, OpenSSL, AppScan, Burpsuite, HP Webinspect, Nessus, ArcSight, Vordal Secure, Cacti / Nagios, Bash, KSH, TCPDump, Wireshark, Metasploit, Splunk/Xpolog, Beeware, Syslog-ng, Opensta, Nmap, Backtrack, ISO/IEC 2700, NIST, OSSTMM, OWASP, BPMN, SonarQube, Kubernetes, Docker Container, Rancher, Proxmox, PingFederate, Google Cloud, Azure, Sentinel, Arcsight AWS, GDPR, ISO2700x, NIST, MITRE ATT&CK, GPG13, HP ALM

CAREER SUMMARY

NTT DATA, *London UK*
Security Test Lead/Architect
March 2022 – Present

- Plan and execute security testing activities, Develop and maintain security testing tools and techniques.
- Design, deploy, configure, and maintain WAF solutions in AWS to protect web applications from various attack
- Work with development teams to design and implement security features. Monthly Report on security testing results. Managing a team of security testers.
- Leading the DevSecOps team. Responsible for developing and implementing security best practices throughout the software development lifecycle including Pentesting.
- Vulnerability Assessment using Qualys and Azure Microsoft Defender, remediation of issues, threat modelling, incident response
- Implemented a zero-trust security architecture, optimizing Cloudflare's edge rules for threat mitigation.
- Managed Cloudflare CDN services for web application defences, enhancing security and performance.
- Integrated Azure Sentinel for proactive cybersecurity threat management and response.
- Configured Azure WAF to shield against web attacks, resulting in reduced vulnerability exploits
- Automated security workflows within Azure Sentinel, improving incident handling efficiency.
- Communicating with stakeholders about security testing activities
- Representing the security testing team to senior management.

AXA INSURANCE, *London UK*
Senior Cybersecurity Engineer
September 2021 – March 2022

Configured, deployed, and maintained F5 Web Application Firewall solution. Developed advanced alerts/reports to meet the requirements of Senior management. Developed automation for security tools management and workflow integration.

- SecOps responsible for a wide range of security technologies
- Managing security testers to engage in Vulnerability Assessment
- Remediation of Pentested issues.
- Python and Bash scripting
- Data Loss Prevention
- Threat Intelligence Gathering and vulnerability scanning, management, and reporting
- Report Writing and presenting
- Web Application Firewall Deployment

HSBC, *London UK*

WAF Consultant

June 2021 – September 2021

Deployment of layer 7 WAF (web Application Firewall) protections across critical web services using Akamai vendor, High Level Design and Low-Level design documentation. Application level (L7) security protections and Bot Security protections across the critical web services. Remediate critical vulnerabilities,

HIRERIGHT,

London UK

Cyber Security Analyst (Information Security Engineering)

August 2019 – June 2021

Information Security and Data protection. Minimizing vulnerabilities, residual risk and deviations from policies (including Access Management, DevSecOps, Secure Development (DAST, SAST) using Qualys & SonarQube, created baseline rules for OWASP Top 10 and SANS Top 25 risk, Quality gate, governance and risk management) coupled with Architecture & Design and Cloud Workload Protection experience to facilitate seamless implementation of Software Development Lifecycle (SDLC) globally:

- Managed, mitigated and reported on Application security risks and associated vulnerabilities via maintenance of a formal threat and vulnerability management framework. Headed the weekly Code review for vulnerabilities.
- IT Owner of PingFederate (SAML) device. Migration of solution to GCP, AWS and Azure Cloud.
- Managed PKI solutions and supported infrastructure security (LDAP, OpenSSL, ModSecurity).
- Advised on, and set priorities and strategies for risk-based vulnerability management and remediation alongside provision of static code analysis tools.
- Embedded and updated security standards across all technologies, including database encryption.
- Confidently engaged with developers as well as senior-level stakeholders to create and secure buy-in to security plans aimed at preventing advanced threats.

DEUTSCHE BANK

Frankfurt Germany

IT Security Consultant

November 2016 – July 2019

Product owner (Scrum) of various projects within leading global banking and financial services company. Coordinated geographically-dispersed team of 25 (India, London, Frankfurt, and Singapore), specializing in data encryption (motion / rest), audits, risks mitigation, cryptographic key, and certificate management. Worked with key stakeholders and senior managers in requirements assessment, research, solutions design, documentation, troubleshooting, and applications migrations as well as updates. Established Proof of Concept (PoC) testlabs, providing accurate and effective virtual environments.

CAREER SUMMARY CONTINUED

Select Highlights:

- Strategically planned and led large cybersecurity projects in the tune of over £40M from inception to delivery, playing key roles in secure development of customised software / roadmaps in alignment with Agile, DevOps, SDLC, and industry best practices.
- Delivered complex database encryption project (process mapping, testing, and remediation), impacting operations globally.
- Facilitated automation of certificate management to support client base expansion via solution process.
- Agile Product Ownership & Roadmapping
- HSM Integration & Key Management
- Advised on cryptographic implementation strategy, covering key management systems, tokenization, and encryption-in-transit/at-rest.

QUADRI CONSULTING LTD.

London UK

Principal **Consultant**

March 2013 - Nov 2016

Delivered expert consulting services, specialising in detection of weaknesses in customer data. Uncovered data gaps and weaknesses via penetration testing, security policies / OS security reviews, and process analysis to ensure compliance with standards.

Select Highlights / Projects:

- TopDevCentral: Ensured security implementation into core of customised development within 70-member team platform. Championed use of static code analysis tool company-wide.
- Nobodys Child Ltd.: Provided e-commerce company in Central London with on-going security assessment services – covering perpetual penetration testing, phishing attacks, password cracking, and anti-virus evasion.
- Boston University: Delivered server vulnerability testing, pen-testing, VPN encryption, Wi-Fi testing, network vulnerability scanning, and physical security coordination (including CCTV incorporation).
- Z-Mind Ltd: Completed penetration testing, encompassing adherence to Penetration Testing Execution Standard (PTES) guidelines, PCI DSS compliance prior to Qualified Security Assessor (QSA) audit, introduction of firewalls, security policy checks, product security tests, black box tests, and patch management.
- Huawei – Data: Managed classification project focused on data loss prevention.
- Eurobride: Performed penetration testing as well as risk / vulnerability assessments focused on application code security, encryption – digital certificate, and managed security services.
- Developed free mobile web apps (IOS / Android), including online vulnerability scanner for websites as well as search app for closest medical doctors, pharmacists, and / or hospitals as well as diagnosis of health issues.

CO-OPERATIVE GROUP, *UK*

Application **Security** **Technical** **Lead**

April 2016 – August 2016

Led a team of fifteen, spearheaded application security programme for a major retail company, managing open vulnerabilities and risks with applications.

Select Highlights:

- Established standards and procedures for development of web applications, optimizing security via implementation and training on secure coding as well as best practices.
- Completed automated verification of applications in alignment with OWASP ASVS requirements.
- Drove application security assessments, vulnerabilities management throughout SDLC, support of remediation efforts, and deployment of attacks defence system (Amazon Web Server (AWS) Cloud F5 ASM AFM HA WAF).

RBS GLOBAL MARKETS, *London*

Web Security Consultant – e-Commerce Infrastructure
July 2012 – March 2013

Provided web security consulting to Royal Bank of Scotland's wholesale banking arm – delivering solutions and participating in the development of a support team consisting of over 70 members globally. Orchestrated implementation of F5 ASM security policy across all devices, installation of IP intelligence, and application on-boarding. Conducted attacker trend analysis, system implementation monitoring, security updates, and vulnerability testing:

- Facilitated log management solution to review security alerts and monitor abnormal traffic patterns (Splunk).
- Served key roles in global migration planning, SDLC support, certificate set-up, and key management to ensure web traffic confidentiality, certificate expiration notification alert scripts, and certificate to ensure F5 ASM administration traffic confidentiality.

CAREER SUMMARY CONTINUED

- Led deployment of 26 new WAF hardware appliances globally across e-Commerce SNP platform, including F5 ASM management appliances on London Campus network.
- Slashed risks by improving threat protection for M&IB external e-Commerce web applications / services.
- Formulated ten-stage exploration process for product selection during PoC.
- Developed F5 ASM baseline security policy for Quality Assurance (QA) and production web applications.
- Led launch of F5 ASM WAF to provide reliable traffic management, preventing single point of failure and improving business continuity.
- HSM Integration: Deployed and configured Thales

BT OPERATE
Suffolk UK

Security Test Lead
June 2011 – January 2012

Provided Royal Bank of Scotland's wholesale banking arm with penetration testing coordination in support of a government project. Managed nine Security Testers covering all platforms within Lehrer programme:

- Contributed with network designers and managers in enhancing design before deployment.
- Created high-level scenario test cases based on security policy as well as design documents.
- Reviewed penetration reports, tooling documentation, and security testing.

BNP PARIBAS FORTIS, *Brussels Belgium*
Web Application Security Consultant

November 2007 – March 2011

Oversaw SDLC of web infrastructure for major financial / banking institution with focus on optimising security standards. Recommended products based on vendor product assessments and testing. Conducted functional and non-functional testing, coordinated workshops, performed capacity planning, and investigated incidents as well as classified breaches.

- Troubleshot operational issues, including incidents, problems, and implementation errors.
- Headed cryptography deployment, certificate / key handling, and documentation of deviation from HSM FIPS Level requirement.
- Deployed remote Syslog-ng centrally to collect all events from F5 ASM.
- Launched F5 ASM WAF to provide reliable traffic management, preventing single point of failure and improving business continuity.
- Conducted gap analysis against compliance frameworks including ISO 27001, NIST, and FIPS 140-2.
- Oversaw integration of HSM-backed key lifecycle systems in payment platforms aligned with PCI-DSS and GDPR.

Additional experience includes roles of Application Security Consultant at Euroclear Bank S.A. / N.V. (Germany), Penetration Tester at Netsecured Solutions (UK), IT Security Governance Manager at Southeastern Trains Ltd (UK), and Technical Security Architect at NetSecured Solutions.

EDUCATION AND QUALIFICATIONS

LONDON SOUTH BANK UNIVERSITY
London UK
BEng (Hons) Degree – Electrical and Electronic Engineering

1992

HOCHSCHULE UNIVERSITY, *Bremen, Germany*
German Language Diploma

1991
